

WeatherTec AG is Laureate of the "LAUDATO SI CHALLENGE AWARD 2018"

04.12.2018, Vatican City. WeatherTec's Rainfall Enhancement technology was awarded as the most promising and efficient solution for water and food security, finally mitigating forced migration globally. The prominent international jury has selected WeatherTec AG in a global rigorous selection process out of 350 companies.

No other solution can scale up to help potentially a billion people in drought regions. The company's successful result in Jordan, the second driest country, with additional billions of m³ of rainwater over 15.000 km² made WeatherTec the most outstanding solution.

Vatican Roundtable at the World Economic Forum

23.01.2019, Davos. The Vatican Prefect of the Dicastery for Promoting Integral Human Development, his Eminence Cardinal Turkson, invited representatives from business, NGO and Head of States to an intimate discussion on "How to Create an Economy that Serves" at the World Economic Forum.

The Swiss-German company WeatherTec AG is a perfect example of a private sector company helping to bridge Africa's challenges. Dr. Fluhrer, CEO of WeatherTec, presented its rollout plan to help 10 African countries to mitigate forced migration of hundreds of millions in Sub-Saharan Africa.

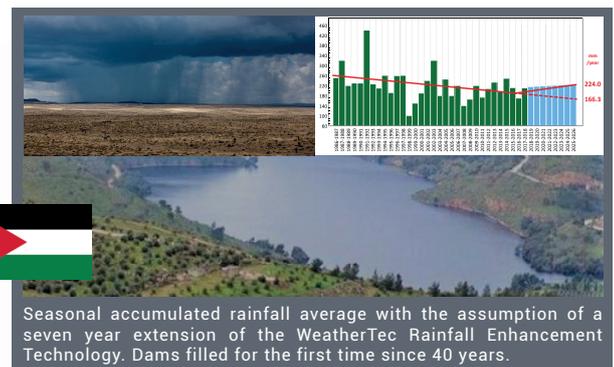

The Vatican Roundtable proved a renewed interest of the Vatican to bridge the business and finance world in the spirit of the Pope Francis' Laudato si Encyclical.

WeatherTec is restoring the Ecosystem: Potential for "Change Climate Change"

The company has reversed the 30-year climatological trend of precipitation decline in Jordan, proving that "Changing Climate Change" is possible.

Within the three years of WeatherTec's operations in Jordan, the impact on the ecosystem over an area of 15.000 km² was truly essential. Since the last 40 years, the dams reached their full capacity and the rivers were filled for the first time. Agriculture has been profited the most. A study for the Royal Hashemite Court proves that the company substantially increases the GDP, therefore the rainfall enhancement service can be financed by the additional tax income.

WeatherTec and Kenya in the "Partnership for Rain": First step into the African Continent

WeatherTec starts its Service for Rainfall Enhancement in Kenya, adopting its technology to its different climatological zones.

It is a first step for the wider project to help the countries in the Sub Sahara Region for achieving water and food security, creating jobs and finally mitigate forced migration.

Experts believe that WeatherTec technology has the potential to help a billion people worldwide.
